1. Sibline Cement Plant – Automation & Reliability Intern – 4 Months			
During my internship at Sibline Cement Plant, I gained practical experience in cement manufacturing operations, from studying the LIBNOR standard and raw material processing to final production, while exploring key machinery like kilns, vertical roller mills, and ball mills. I studied automation technologies such as PLCs, SCADA, HMIs, and sensors and their role in enhancing production efficiency.			
As part of a personal project, I focused on securing the HMI network that consists of 29 HMIs. The purpose of this project was to address a critical problem: how to maintain operational continuity in case of a partial or full failure of an HMI.			
Key Contributions:			
• Prepared the Allen Bradley 2711P-T6M20D HMI as a reserve HMI for the 2711PT6M20D8 Allen Bradley by extracting and downgrading the HMI *mer file.			
• Gathered and organized comprehensive datasheets for all HMIs into individual files.			
• Created an Excel sheet detailing location, brand, identifier, editor and runtime software, lifecycle, hardware specs, and connectivity options.			
• Developed tutorials for HMI management steps, including: HMI Application Upload/Download, Remote Access, Loading HMI Applications on a Laptop, and Restoring *mer Files with FactoryTalk View Studio.			
• Prepared a report summarizing HMI quantities by brand (Allen Bradley, Beijer Electronics, Eaton, Schneider, Siemens), challenges faced, solutions implemented, and insights into potential risks.
